

## Singapore User Group

## Singapore

Date: 3 ${ }^{\text {rd }}$ April 2024
Time: 6:30 PM - 8:30 PM SGT
Venue: Alteryx Singapore Office
Address: One Raffles Quay, North Tower \#21-02 Singapore 048583

## NOTES

- The UG Slides will be shared post-event. Some slides will undergo changes prior to uploads for confidentiality.
- Photos of the UG will be taken and posted on the UG site and on social media.
- The spirit of the UG is to share, learn, and network amongst peers.
- Attendance will be taken.
- Please ensure your phones are on silent mode.
- You may leave earlier if needs be - just leave a note so that the team is aware.
- Make friends and connect!

## AGENDA

1 Opening Remarks
By: AYX SG UG Leadership
2 UG Roadmap
By: Calvin Tang
3 Alteryx Updates
By: Michael Utama
4 MI POC Demo
By: Oliver Wyman Team
5 Tips \& Tricks
By: Calvin Tang / Dawn Duong
6 Weekly Challenges
Open to all
$7 \underset{\substack{\text { Open to all }}}{\text { Closing }}+$ QnA
Open to all

## OPENING REMARKS

Greetings \& Welcome a Revived UG Leadership!

Main Theme: SG UG Revival!

## Some Background...

- Dawn has led the SG UG for a few years!
- Both Dawn and Calvin are ACEs!
- The SG UG has 284 members and growing!

## UG ROADMAP 2024

We are always open to all in SG!

- Feel free to volunteer to share in the next UG!
- We also look for SparkED Volunteers to share in SG!

## INSPIRE 2024

Register Today for Inspire
2024
Session catalog now available

INSPIRE 2024
AGENDA AT-A-GLANCE

| MONDAY MAY 13 | TUESDAY MAY 14 | WEDNESDAY MAY 15 | THURSDAY MAY 16 |
| :--- | :--- | :--- | :--- | :--- |
| Inspire Pre-Conference Alteryx Training | Inspire Keynotes |  |  |
|  | Alter.Nation |  |  |
|  | Inspire Breakout Sessions |  |  |

## ALTERYX UPDATES

## MI POC DEMO

## TIPS \& TRICKS

## CHOOSING THE RIGHT TOOL

Knowing how to use it is important, but knowing what to use it for is more important

## ENABLERS

Tools that help you when using other tools.

## ALTERYX TOOL CHEATSHEET

You will need to combine tools to achieve certain actions

| ACTIONS YOU MAY WANT TO TAKE... | tOOLS THAT CAN DO THAT IN DESIGNER |
| :---: | :---: |
| Change Datatye | Select *) Formula (8) Autofield (3) |
| Row to Column | Transpose |
| Column to row | Cross Tab ${ }^{\text {a }}$ |
| Split one cell into multiple cells | Text to Column ${ }^{\text {a }}$ Formula ${ }^{\text {( }}$ |
| Combine lists by adding rows | Union |
| Combine lists by adding columns | Join [ 영 Find \& Replace $^{()_{\text {Append Fields }} \text { 웅 }}$ |
| Croup Information |  |
| Rank Data |  |
| Cet rid of columns | Select ${ }^{(2)}$ |
| Cetr rid of empty values | Formula (4) Filter (4) |
| Cet rid of ows | Formula (8) Filter () Sample ${ }^{\text {a }}$ |
| Cet rid of puncutation or whitespace | Data Cleansing (1) |

| Perform a calculation | Summarize $\Sigma_{\text {Formula }}$ (3) |
| :---: | :---: |
| Work with dates | Datetime ${ }^{(0)}$ Formula ${ }^{\text {(4) }}$ |
| Find a value (unique, min, max) | Summarize $\Sigma_{\text {Unique }} *_{\text {Find }}$ Replace $\chi^{\text {® }}$ |
| Identify records with a unique ID | Record ID (3) |
| Replace a value | Find \& Replace $\mathcal{Z}_{\text {Formula }}$ ( ) |
| Input Data | Input Data |
| Rename Fields | Select ${ }^{\text {a }}$ |
| Reorder Fields | Select *) |
| View Results | Browse ${ }^{\text {a }}$ |
| Ouput Results | Output Data 國 |

## ALTERYX FUNCTIONS \& TERMINOLOGY CHEATSHEET

## FUNCTIONS

When using functions in Designer, keep in mind that datatype is very important. The table on the right shows the function category and an $X$ indicates that functions in that category are compatible with that column's corresponding datatype. This is not an exhaustive list. Rather, use this table to match your data's type and find a category that is compatible with that datatype to ensure the function will work. Note that you may need to change your data's datatype if you wish to use it with a particular function.

## TERMINOLOGY

Blend - merging data from different sources into one dataset, such as data from different spreadsheets, databases, or other sources into one complete dataset.

Concatenate - joining one or more text strings together.
Datatype - an attribute of data which lets the computer know how to interpret that value. There are 5 main datatypes in Designer (string, numeric, DateTime, Boolean, Spatial). Datatypes can be changed for particular values.
Delimiter - a sequence of one or more characters that creates a boundary between values. Common delimiters include commas, pipes, and quotes.

Filter - filtering separates your data into two streams: True containing the data met your criteria, and False containing the data that did not meet your criteria.
Flag - flagging data is a technique used to categorize data. This is usually accomplished with a conditional statement which checks values against a set of criteria and creates a corresponding flag in another column.

Parse - parsing separates values based on delimiters. Examples include: separating keywords from phrases, separating numbers from letters, or area codes from phone numbers.
Sort - ranking items in ascending or descending order.

## VERSION ERROR HANDLING

## Alteryx Version Differences

- Change the version of the workflow/macro/app using Notepad or Notepad++ and save it.
- Ensure that the version gap is not too big, and ensure your tools are backward compatible. E.g: Control Containers are only in v2023.1 onwards.
- Once changed, it should work for the receiving party.

## GETTING LIST OF SHEET NAMES FROM DIRECTORY

## WEEKLY CHALLENGES

## CLOSING + QnA

## THAOK YOU

## DIRECTIONS

The nearest MRT Station is Downtown (DT17)

You will need to register at One Raffles Quay to go up.
Once registered, head up to \#21-02 for Alteryx.

One Raffles Quay, North Tower \#21-02

## APPENDIX

## Appendix A: Core Concepts

## Data Parse, Blend and Transform in Excel vs Alteryx

| Task | Excel | Alteryx | Alteryx Tool |
| :---: | :---: | :---: | :---: |
| Update data types, rename columns, remove columns, and change column order. | Format cells or change syntax, rename column headers, delete columns or select and shift to move columns. | Use the Select Tool to easily change data types, rename fields, remove fields or re-order fields |  |
| Change data types | Format cells using the format cells menu or change syntax | Use the Auto Field Tool to automatically update the data types of your fields to match the values contained in the field | $\bar{E}$ |
| Remove Rows | Manually select the rows you'd like to delete or use a quick filter to remove what you don't need | Use the Filter Tool to create simple or complex filters on your data rows. |  |
| Sort | Highlight the columns and do a regular or custom sort. | Use the Sort Tool to sort your data |  |
| Formulas | Write formula in cell and drag down to carry formula into more cells | Use the Formula Tool to create new fields or update existing fields with a wide variety of formulas |  |
| Formulas containing multiple rows of data <br> i.e. Cumulative Sum | Enter value into first cell then create formula using the starting point and additional rows of data. Drag formula to applicable rows. | Use the Multi Row Formula Tool to utilize more than one row of data in your formulas. | $1001$ |
| Apply formula to multiple columns of data i.e. Calculate the \% each field makes of the whole | Create a table of your data and pivot on the data | Use the Multi Field Formula Tool to execute a single function on multiple fields | $4$ |

## Appendix A: Core Concepts (continued)

## Data Parse, Blend and Transform in Excel vs Alteryx

| Task | Excel | Alteryx | Alteryx Tool |
| :---: | :---: | :---: | :---: |
| Parse data | Select columns and use the Text to Columns Wizard | Use the Text to Columns Tool to split a field with a regular format, such as, a csv. |  |
| Join two tables with a common field | Use VLOOKUP formula or wizard | Use the Join Tool to join two tables with a common field. |  |
| Append Rows | Copy and paste contents of table so fields align appropriately | Use the Union Tool to combine multiple worksheets based on the field names or maintaining the position of each column. |  |
| Pivot Table (Rows to Columns) | Build a pivot table and mold data to desired shape | Use the Cross Tab Tool to pivot the orientation of the data table so vertical data fields can be viewed on a horizontal axis summarizing data where specified. |  |
| Pivot Table (Columns to Rows) | Build a pivot table and mold data to desired shape | Use the Transpose Tool to pivot the orientation of the data table. It transforms the data so you may view Horizontal data fields on a vertical axis. |  |
| Aggregate and Sum data | Write a sum formula or use the auto-sum symbol | Use the Summarize Tool to aggregate data perform operations, like sum or count, on numeric fields. |  |

## APPENDIX B: DATA TYPES 1

## Strings

$\left.\begin{array}{|l|l|l|l|}\hline \text { Type } & \text { Description } & \text { Simplified } & \text { Example } \\ \hline \text { String } & \begin{array}{l}\text { Fixed Length Latin-1 String. The length } \\ \text { should be at least as large as the longest } \\ \text { string you want to be contained in the field, } \\ \text { or values are truncated. Limited to 8,192 } \\ \text { Latin-1 characters. }\end{array} & \text { Fixed String } & \begin{array}{l}\text { Any string whose length does not vary much from } \\ \text { value to value, and only contains simple Latin-1 } \\ \text { characters. }\end{array} \\ \text { E.G: House; Dog; Partner; Hello } \\ \text { Cannot read: Moнгол Улc, 香港 }\end{array}\right]$

## APPENDIX B: DATA TYPES 2

## Numerical Data

| Type | Description | Example |
| :---: | :---: | :---: |
| Byte | A $_{8}$ unit of data that is 8 binary digits (bits) long. A byte field is a positive whole number that falls within the range 0 thru 255 , or $2^{8}$ | 0, 1, 2, 3....253, 254, 255 |
| Int16 | A numeric value without a decimal equal to 2 bytes, or $-\left(2^{15}\right)$ to $\left(2^{\wedge}{ }^{15}\right)-1$ | -32,768 to 32,767 |
| Int32 | A numeric value without a decimal equal to 4 bytes, or $-\left(2^{31}\right)$ to $\left(2^{\wedge 11}\right)-1$ | -2,147,483,648 to 2,147,483,647 |
| Int64 | A numeric value without a decimal equal to 8 bytes, or $-\left(2^{63}\right)$ to $\left(2^{63}\right)-1$ | A numeric value without a decimal equal to 8 bytes, or $\left(2^{63}\right)$ to $\left(2^{63}\right)-1$ |
| Fixed Decimal | A numeric value with a decimal. <br> The length (precision) of a fixed decimal is equal to the width of the integer (left side of decimal) plus the decimal point plus the width of the scale (right side of decimal). If a number is negative, the negative sign is also included in the length. Alteryx defaults a Fixed Decimal to 19.6. The maximum precision is 50, inclusive of the decimal point and negative sign (if applicable). A Fixed Decimal is the only numeric data type with an adjustable length. | A value of 1234.567 with a length of 7.2 results in 1234.57 |
| Float | A standard single-precision floating-point value. It uses 4 bytes \& can represent values from $+/-3.4 \times 10-38$ to $3.4 \times 1038$ with 7 digits of precision. <br> A float uses a decimal that can be placed in any position \& is mainly used to save memory in large arrays of floating-point numbers. | $+/-3.4 \times 10^{-38}$ to $3.4 \times 10^{38}$ with 7 digits precision |
| Double | A standard double-precision floating-point value. It uses 8 bytes \& can represent values from $+/-1.7 \times 10-308$ to $1.7 \times 10308$ with 15 digits precision. <br> A double uses a decimal that can be placed in any position. A double uses twice as many bits as a float \& is generally used as the default data type for decimal values. | $\begin{aligned} & +/-1.7 \times 10^{-308} \text { to } 1.7 \times 10^{308} \\ & \text { with } 15 \text { digits } \end{aligned}$ |

## APPENDIX B: DATA TYPES 3

## Date \& Time Data + Boolean Data + Spatial Objects

| Type | Description | Example |
| :---: | :---: | :---: |
| Date | A 10-character String in "yyyy-mm-dd" format. | December 2, $2005=2005-12-02$ |
| Time | Default is an 8-character String in "HH:MM:SS" format. Specify additional precision up to 18 digits, for a max of 27 characters, including the decimal separator. | 2:47 and 53 seconds a.m. $=$ 02:47:53 2:47 and 53.236 seconds p.m. $=$ 14:47:53.236 |
| DateTime | Default is a 19-character String in "yyyy-mm-dd HH:MM:SS" format. Specify additional precision up to 18 digits, for a max of 38 characters, including the decimal separator. | $\begin{aligned} & \text { 2011-05-15 07:20:33 } \\ & 2005-12-02 \text { 14:47:53.123456 } \end{aligned}$ |
| Type | Description | Example |
| Bool | An expression with only two possible values: True or False. | The words 'True' and 'False' display in the results where 'False' = 0 \& 'True' = nonzero. |
| Type | Description | Example |
| SpatialObj | The spatial object associated with a data record. A table can contain multiple spatial object fields. | A spatial object can consist of a point, line, polyline, or polygon. |

## APPENDIX C: DATETIME FUNCTIONS

## Useful tips \& tricks for datetime data

## Output from DateTimeFormat / DateTimeParse

Abbreviated weekday name ("Mon") OR Full weekday name ("Monday") Abbreviated month name ("Sep") OR Full month name ("September") The date and time for the computer's locale OR The century number ("20") / NA Day of the month ("01") OR Equivalent to \%m/\%d/\%y

Day of the month, leading 0 replaced by a space (" 1 ") Same as \%b ("Sep") OR Hour in 24-hour clock, 00 to 23
Hour in 12-hour clock, 01 to 12 / NA
The day of the year, from 001 to 365 (or 366 in leap years)
24 hours, leading zero is space, " 0 " to " 23 " OR 12 hours, leading zero is space, " 1 " to "12"
Minutes, 00 to 59
Month number, 01 to 12
"AM" or "PM" OR "am" or "pm" Seconds, 00 to 59
Time in twenty-four-hour notation. Equivalent to \%H:\%M:\%S / NA
Day of week as a decimal, 1 to 7, with Monday as 1 OR This returns the week number, as 00 - 53, with the beginning of weeks as Sunday. / NA

Day of week as a number, 0 to 6 , with Sunday as 0 OR This returns the week number, as 00 - 53 , with the beginning of weeks as Monday. / NA
\%x or \%X The date for the computer's locale OR The 12-hour clock time, including AM or PM ("11:51:02 AM") / NA
$\% y$ or $\% Y \quad$ Last two digits of the year ("16") OR All four digits of the year ("2016")
$\%$ or \%Z
