Phone: 1-877-392-2021

Company Overview

Twenty Twenty Analytics provides data analytics to financial institutions, primarily credit unions, to assist in risk management, marketing and strategic decision making.

Analytics are performed using clients' loan-level data, which is generally provided in disparate file and layout types. Our processes involve:

- Data blending (Alteryx) and standardization for input into our analytic platform
- Submission of data inputs to partner companies who provide additional attributes to append to loan records
- Output to Tableau, maintaining projects and permissions individually for each of our clients

Position Overview

Twenty Twenty Analytics is a relatively small, albeit mature, organization. As such, this position will involve the processes outlined above, but may also include:

- Client Training and Support
- Development of Training Manuals and Guides
- Development of New Tableau Visualizations and Alteryx Workflows/Macros
- Maintaining **Master Files** for both Tableau Workbooks and Alteryx Workflows/Macros

Qualifications

Minimum qualifications are below, although should not preclude more experienced candidates from applying.

- Industry experience working with Tableau and Alteryx
- Demonstrable experience and understanding of database design and management
- Professional consulting and/or financial services experience strongly preferred
- The ability and desire to work under limited supervision, remotely and, if needed, on site with clients
