

Excel document with hierarchy raw data with these fields:

- Employee Emp_id
- Employee Name
- Supervisor emp_id
- Supervisor Name

Go through all fields, one row at a time

Start loop, to process all fields one at a time. Are all fields processed?

Yes
END

No
Store name and emp_id for this employee in temporary variables

Are there any "parents" in the hierarchy table that use this emp_id as their parent?

Yes
Update hierarchy table and set this emp_id as "yes" to has_children

No
Update hierarchy table and set this emp_id as "no" to has_children

Update hierarchy, set parent emp_id and parent_name as this emp_id / this name, WHERE supervisor == this emp_id
